Bar Azulay

FULL-STACK AI ENGINEER | AI AGENTS | PRODUCTION LLM SYSTEMS

054-946-6126 | bar3882@gmail.com | GitHub | LinkedIn

AI & Automation Developer with 1.5+ years of experience designing, building, and deploying enterprise AI solutions end to end. Own solution architecture, technology selection, development, and production deployment. Strong Python, Azure, LLM and agent engineering background, with professional JavaScript/web integration experience. Daily user of AI coding tools (Cursor, Claude Code, GitHub Copilot).

PROFESSIONAL EXPERIENCE

Paz Retail and Energy | AI & Automation Engineer 2025 – Present

- **End-to-end ownership —** Translate business requirements into system architecture, technology choices, backend services, integrations, and production releases.
- **Applied AI —** Build AI agents, tool-based workflows, RAG/semantic search applications, LLM document extraction, and structured-output pipelines; implement evaluations and quality checks.
- **Cloud & reliability —** Deploy services on Azure Functions and Container Apps with Service Bus, Blob Storage, APIM and Application Insights; implement monitoring, retries and failure handling.
- **Web integration —** Develop and integrate JavaScript-based AI chat widgets, customize RTL/UI behavior, troubleshoot WebSocket connectivity, and serve frontend assets via Azure Storage.

SELECTED PROJECTS

- **Municipal Signage AI Agent —** Designed an Azure backend and Wonderful agent with specialized tools for document processing, sign search, spreadsheet comparison, human approval, and workflow automation.
- **Self-Improving Delivery Certificate Extraction —** Building a self-learning layer on top of AI extraction of delivery certificates to XML for SAP: a daily export of SAP-approved certificates serves as ground truth, every extraction is scored against it, and the gaps feed back to improve accuracy with minimal human intervention.
- **Pazomat AI Chat Widget —** Developed and integrated a JavaScript chat widget into a production website; customized branding and RTL, fixed WebSocket behavior, and connected the UI to a Wonderful AI agent.
- **Call Analytics & Recording Automation —** Built an automated Playwright + Microsoft Graph OTP ingestion workflow feeding a Wonderful Observer solution for approximately 10,000 calls/month.
- **Survey Insights AI Platform —** Built LLM-powered analysis of customer surveys with structured KPIs, branch-level insights, evaluations, and automated management reporting.
- **Document Intelligence & Data Platforms —** Developed invoice, delivery-certificate and utility-document extraction to validated JSON/XML; scaled Wolt product and promotion ingestion to 200+ branches with retry/failure recovery.

TECHNICAL SKILLS

AI & LLM: AI Agents, RAG, Semantic Search, LLM Evaluation, Structured Outputs, Prompt Engineering, Azure Document Intelligence, OCR

Backend & Web: Python, FastAPI, REST APIs, JavaScript, WebSockets, HTML/CSS integration, SQL, gRPC; React, Node.js, Next.js

Cloud & Automation: Azure Functions, Container Apps, Blob Storage, Service Bus, APIM, App Insights, Microsoft Graph, Power Automate; AWS

AI Coding Tools: Cursor, Claude Code, GitHub Copilot

Tools & DevOps: Docker, Git, GitHub, CI/CD, Playwright, Kubernetes; LangChain, LangGraph, LangSmith, MCP

EDUCATION

B.Sc. Computer Science — Holon Institute of Technology (HIT), 2020–2024

AI-Driven Development (AIDD) course — Holon Institute of Technology (HIT), 2026 – Full-stack development with AI-assisted workflows; React, Node.js, Next.js practice
